(54) Title: METHOD TO SECURE THE EXECUTION OF A PROGRAM AGAINST ATTACKS BY RADIATION OR OTHER

(57) Abstract: The method according to this invention concerns a method to secure the execution of a program stored in an electronic assembly comprising information processing means and information storage means. The method consists in checking the execution time of at least one sequence in said program with respect to the normal predetermined execution time of said sequence. This invention also concerns the electronic module in which said method is implemented and the card comprising said module.
